TEL AVIV UNIVERSITY

BLAVATANIK SCHOOL OF COMPUTER SCIENCE

GOOGLE WORKSHOP FOR WEB TECHNOLOGIES, 2013-2014

Progress & Features

All team members focused on the main screen (visual calendar)

- Creating the voting table : Sync with google calendar & insert to DB
- Calculate the best times for the event:
 - ✦ Suggest times to event owner
 - ✦ Choose best time and send invites
- Redirecting and removing event info pages
- New buttons:
 - ✦ Friends filter
 - ✦ Page info
 - ✦ Help
- Adding editing features & Notifications
- Got an outstanding feedback from user expert Ziv Tu
- Solved the 100 E-mails per day problem – **we got 2000\$ for google app engine !**

Difficulties vs. Easy Stuff

- **Creating custom visual calendar that would fit our needs** - intuitive, custom choices, etc..
- Choosing times algorithm (logic)

- Good design (we easily added the voting page – with not many changes)
- JQuery is very intuitive and adjustable. We could easily add more icons , and design our main feature using it

Pilot plan

- **Target audience:** acquaintances, family, co-workers, Facebook friends, hospital nurses(?)
- **Feedback:** Through a short poll
- We will try to get as many people as we can:
 - **The pilot already started on a small amount of people.**
 - Soon we will start to invite new audience to use our app.

Future Features

Feature	Time Estimation
Improve suggest times algorithm	1 week
Phone-Gap	2 weeks
Add uncheck all button	3 days
Making UI Better + Logo	1 week
Add to friends filter declined visually	3 days
Implementing user expert advices	2 weeks
Facebook login \ creating facebook event*	3 days
UI themes by event type*	3 days

* Nice to have

Road-Map

Milestone

3

- Better UI, UX, Logo
- Phone Gap
- Adding features
- Implement conclusions from pilot
